**Lab5:** Online shopping system SRS document.

The online shopping system is used to reduce the time and effort required for normal shopping.

It helps in managing orders,customers,shopping carts,admins etc.,

- The system is used by a user who can be an admin , a session manager or a customer
- The admin handles actions like create and delete departments and products. He can view the catalog details and update new product details or existing ones and can also manage customers.
- The customers can register and login to the system ,he /she can buy products by searching and also update their profiles.
- The session manager manages the session for a customer like listing products ,getting customer details and give order details.
- A shopping cart feature exists which lists all the products a customer intends to buy
- The various orders can be placed in the system by giving relevant order details.
- There exist different departments which contains various categories of products and their info
- Once an order is placed the shipping info of the product must be available for product delivery to customers.
